KETT Portable **POWER SHEARS**

4 to 9 times faster
than hand shears!

Kett Portable Power Shears will cut metal up to 18 gauge and plastic or other sheet materials up to 3/32 inch thick. Both the electric and pneumatic models will save up to 90% of hand shear time.

Because the Kett shear weighs less than five pounds, it is a completely portable hand tool which can be used to cut straight or eccentric configurations in round, flat or curved surfaces.

Both power tools cut smooth, safe and clean with no burring, buckling or distortion of material. There is no need for filing, bending or pounding into shape.

The Kett Shear is ideal for sheet metal, auto-body, sign and model shops. A perfect tool for ductwork, gutters, flashing, aluminum siding, auto-body panels, etc.

Portable Power Shears

4 to 9 times faster than hand shears

Double Insulated

ELECTRIC Model No. K-200

ELECTRIC Model has extra power, heavy duty bearings, and die cast aluminum cutting head.

Equipped with 120V AC motor. Housing is die cast aluminum. Motor and spindle have ball and needle bearings and the blade driving eccentric has needle bearings. Cutting blades are of the finest A-2 tool steel.

Capacity, Mild Steel.....	18 gauge
No Load Speed.....	2500 RPM
Maximum Cutting Speed.....	180" per Min.
Net Weight.....	4 lbs.
Overall Length.....	13½"
Ampere Rating.....	4.5
Horsepower Rating.....	0.3
Width of Cut.....	7/32"

PNEUMATIC Model No. P-500

PNEUMATIC Model is equipped with air-metering trigger to permit variable speed cutting.

Requires ninety-pounds per square inch of air pressure for maximum efficiency. Unit is equipped with an air metering device so that initially the blade can be operated slowly to prevent chatter at start of cut. Cutting blades are of the finest A-2 tool steel.

Capacity, Mild Steel.....	18 gauge
No Load Speed.....	2200 RPM
Maximum Cutting Speed.....	180" per Min.
Net Weight.....	4 lbs.
Overall Length.....	9"
Width of Cut.....	7/32"

- Ideal for every sheet metal shop, design department, model shop, maintenance department or production job.

Cuts autobody panels without distortion. Cuts through undercoating without stalling. Fast cutting saves time and money.

- Used in sign shops for cutting and trimming contour shapes. Cuts down production time and costs considerably.
