

Add cutting convenience to every job.

Kett's portable Kit 340 gives you in-the-field convenience wherever you go. This rugged, all-steel painted carrying case travels easily to your work site, with a separate compartment to hold extra blades or interchangeable cutting heads. The Kit features the KE-440 Power Shears for light-weight cutting maneuverability.

KE-440 14 Gauge Power Shears

The variable-speed KE-440 cuts 14 gauge mild steel and most grades of stainless to 16 gauge. Pistol-grip trigger control lets you make slow starting cuts when needed, or adjust speed for lightweight or heavy materials.

Double-insulated, the KE-440 cuts at over 150 inches per minute. Distortions are absorbed in an easily disposed of waste curl, leaving a clean, flat sheet, ready to fabricate.

The KE-440 is powered by a 120 volt AC, 4.5 amp motor for up to 2500 RPM. These shears weigh only 5 pounds and are 14" long.

Convenient replacement blades

You can always have the blades you need on-the-job with the Kit 340's handy storage compartment. The KE-440 comes equipped with finest high-speed steel cutting blades, which can be replaced individually, or in replacement blade kit #106.
